

M16 - Military Style Zeroing Target

How to zero your rifle AT 25 METERS using this target:

- Rotate rear sight elevation knob to the 8/3 setting, then rotate up one "click" past the 300 mark. Aim at the target center.
- Adjust your sights to move the shot group center as close as possible to the center of the target
- Follow rear and front sight instructions listed on the target if your group center needs to be moved toward the bull
- After zeroing, rotate the rear sight elevation knob back one "click" to the 800/300 meter mark
- Your rifle is now zeroed for 300 meters
