

500 S&W

500 S&W

Use your (UNLOADED) gun to measure your groups. Info based on S&W Model 500 (with 4" Barrel)

- From front lug (where barrel attaches) to end of compensator (shorter, jacketed version) measures exactly 3"
- Can you cover all of your shots with the barrel of your S&W500? If so, you shot a <3" group!
- Note: There is 3/4th inch space between each line in above target, just enough to fit a shot between the lines (incl. tearing)
